## Overview of number formatting

- Numbers and ordered events less than 10 in full should be written as words, not numerals (see examples), although there are some exceptions.
- Numbers with two or more digits should be written as numerals unless they are at the start of a sentence (see examples).
- Numbers between 1000 and 9999 should contain no punctuation.
- Numbers with five or more digits should include commas (not decimal points or full stops).
- Use 'from' and 'to' instead of a dash to describe a range of numbers in text. Numbers written out in full should be hyphenated appropriately.
- Often, judgement is needed to determine the best presentation for a set of numbers.

## Large numbers

Use ' 6.1 million' rather than ' $6,100,000$ '
Avoid 'billion' and 'trillion', due to ambiguity about their value. If they are used, they should be explained in terms of millions (e.g. '6 billion (6000 million)')
