Versions and changes to MECIR

Process for updating MECIR

- For details on when and how updates to MECIR are made, please see here.

Updates pending for the next version

No updated pending.

Version August 2023 (PDF version):

- Updates made to MECIR authors' affiliations.
- Jacqueline Chandler and David Tovey have stepped down as authors of MECIR.
- Cochrane has retired its Protocol, Reporting and Update Reporting standards (MECIR items PR1 to PR44, R1 to R109 and UR1 to UR7) and now endorses PRISMA (Preferred Reporting Items for Systematic reviews and Meta-Analysis) reporting guidelines for use in Cochrane Reviews of interventions. This change does not affect the MECIR Conduct standards or the Planning or Conduct standards for Updates.
- Links to version 6.4 of the Cochrane Handbook for Systematic Reviews of Interventions added to all relevant standards.
- C48 rationale updated to: "Some studies may have been found to be fraudulent or articles about them may have been retracted since publication for other reasons (…)"

Version February 2022 (PDF version):

- C52 and C56 merged into one assessing risk of bias Conduct Standard (C52: Assess the risk of bias for each study result contributing to an outcome in the 'Summary of findings' table. For randomized trials, the RoB 2 tool should be used, involving judgements and support for those judgements across a series of domains of bias, as described in the Handbook; C57 to become C56, C58 to become C57, C59 to become C58, C60 to become C59 and there will no longer be a C60 MECIR Conduct Standard. The standard now makes it more explicit that the original risk of bias tool can still be used.
- C26 rationale updated to: Sometimes a review will address questions about adverse effects, economic issues or qualitative research using a different set of eligibility criteria from the main (effectiveness) component. In such situations, the searches for evidence must be suitable to identify relevant study designs for these questions. Different searches may need to be conducted for different types of evidence.
- C28 updated to: Search relevant grey literature sources such as reports, dissertations, theses and conference abstracts.
- C37 updated to: Rerun or update searches for all relevant sources...

Version February 2021 (PDF version):

- C56: Highly desirable -changed to- C56: Mandatory
- R106: 'Declarations of interest', updated to reflect Cochrane’s new Conflict of interest policy.

Version March 2020 (PDF version):

- During February and March 2020 edits were made to the PR, R, U and UR Standards in MECIR to update referencing to the new Handbook (version 6). All changes are reflected at the bottom of each page.
- PR14: Define in advance which outcomes are primary outcomes and which are secondary outcomes. -changed to- Define in advance outcomes that are critical to the review, and any additional important outcomes.
- PR27: Assess the risk of bias for each included study. For randomized trials, the Cochrane 'Risk of bias' tool should be used, involving judgements and supports for those judgements across a series of domains of bias, as described in Chapter 8 of the Handbook (version 5 or later). -changed to- Assess the risk of bias in at least one specific result for each included study. For randomized trials, the RoB 2 tool should be used, involving judgements and support for those judgements across a series of domains of bias, as described in the Handbook (version 6).
- PR28: If the Risk of Bias 2 tool (see Handbook (version 6) Chapter 8) is to be used, state whether interest will be in the effect of assignment to intervention or the effect of adhering to intervention, and explain how results will be selected to be assessed for risk of bias (i.e. for which outcome domains, outcome measures, time points and analyses). ADDED
- PR35: according to summary risk of bias, or restricted to studies at low risk of bias. -changed to- according to summary risk of bias, restricted to studies at low risk of bias or restricted to low-and-some-concerns of risk of bias.
- R32: Define in advance which outcomes are primary outcomes and which are secondary outcomes. -changed to- Define in advance outcomes that are critical to the review, and any additional important outcomes.
- R45: Assess the risk of bias for each included study. For randomized trials, the Cochrane 'Risk of bias' tool should be used,
involving judgements and supports for those judgements across a series of domains of bias, as described in Chapter 8 of the Handbook (version 5 or later). -changed to- Assess the risk of bias in at least one specific result for each included study. For randomized trials, the RoB 2 tool should be used, involving judgements and support for those judgements across a series of domains of bias, as described in Handbook version 6.

- R53: according to summary risk of bias, or restricted to studies at low risk of bias. -changed to- according to summary risk of bias, restricted to studies at low risk of bias or restricted to low-and-some-concerns of risk of bias.

- R55: (Include a ‘Summary of Findings’ table according to recommendations described in Chapter 10 of the Cochrane Handbook (version 5 or later). Specifically:
  - include results for one population group (with few exceptions);
  - indicate the intervention and the comparison intervention;
  - describe the outcomes (e.g. scale, scores, follow-up);
  - indicate the number of participants and studies for each outcome;
  - present at least one baseline risk for each dichotomous outcome (e.g. study population or median/medium risk) and baseline scores for continuous outcomes (if appropriate);
  - summarize the intervention effect (if appropriate); and
  - include a measure of the certainty of the body of evidence)

-changed to-
Justify and document all assessments of the certainty of the body of evidence (for example downgrading or upgrading if using GRADE).

- R55: MECIR conduct standard 76 (Use the five GRADE considerations (study limitations, consistency of effect, imprecision, indirectness and publication bias) to assess the certainty of the body of evidence for each outcome, and to draw conclusions about the certainty of evidence within the text of the review.) [PRISMA item 12]

- changed to-
MECIR conduct standard 74: Use the five GRADE considerations (risk of bias, consistency of effect, imprecision, indirectness and publication bias) to assess the certainty of the body of evidence for each outcome, and to draw conclusions about the certainty of evidence within the text of the review.

- R56: to complete a PRISMA type flow chart -changed to- to be able to complete a flow diagram

- R73: Present a ‘Risk of bias’ table for each included study -changed to- Present at least one ‘Risk of bias’ table for each study that is included in a synthesis

- R73: The ‘Risk of bias’ table in RevMan should be used, this is an extension of the table of ‘Characteristics of included studies’. -changed to- ‘Risk of bias’ presentation tools in RevMan should be used wherever possible.

- R73: Assess the risk of bias for each included study. For randomized trials, the Cochrane ‘Risk of bias’ tool should be used, involving judgements and support for those judgements across a series of domains of bias, as described in Chapter 8 of the Handbook (version 5 or later) -changed to- Assess the risk of bias in at least one specific result for each included study. For randomized trials, the RoB 2 tool should be used, involving judgements and support for those judgements across a series of domains of bias, as described in Handbook (version 6).

- R74: Summarize the risk of bias -changed to- Present an overall risk of bias assessment

- R76: the heading hierarchy -changed to- any heading hierarchy

- R76: in RevMan5 ADDED

- R76: This standard will not be required when using the study-centric data structure of RevMan Web. ADDED

- R101: Consider the potential impact of reporting biases -changed to- Consider the potential impact of non-reporting biases

- U9: For randomized trials, they must be assessed using a currently accepted version of the Cochrane ‘Risk of bias’ tool. The separation of performance bias and detection bias in the evaluation of blinding is highly desirable. -changed to- If the previous version used the original risk of bias tool to assess randomised trials, consider whether or not to switch to the Risk of Bias 2 tool (see Handbook (version 6) Chapter 8), including how many randomised trials were assessed in the previous version, how many new studies are expected for inclusion in the update, how well it was implemented in the previous version and whether it is feasible to switch.

Version October 2019 (PDF version):

- Updates made to MECIR authors’ affiliations
- Links to version 6 of the Cochrane Handbook for Systematic Reviews of Interventions added to all relevant standards (Conduct Standards C1-C75)
- Links to the Cochrane Editorial and Publishing Policy Resource updated
- James Thomas and Ella Flemyng added as co-authors
- Edits made to the MECIR Standards ‘Key points and introduction’ page (see ‘Section info’ on the page for details).
- Edits made to the ‘Development and consultation’ page (see ‘Section info’ on the page for details)
- New ‘Implementation of the standards’ section written by Karla Soares-Weiser (see ‘Section info’ on the page for details)
- Edits made to the ‘Key points and introduction’ pages for each of the four sections (see ‘Section info’ on the conduct, reporting of protocols, reporting and updates pages for details)
Added a new 'Translations of the MECIR Standards' section
Citation to the MECIR Manual as a whole and each section updated to reflect Version October 2019
- U11, column 2: quality -changed to- certainty (x2)
- UR5, column 3: quality -changed to- certainty
- UR7, column 3: quality -changed to- certainty
- PR39 column 2 and 3: quality -changed to- certainty (x4)
- PR40 column 3: quality -changed to- certainty
- R12, column 3: quality -changed to- certainty
